OPTHALMOLOGY GUIDELINES FOR USE OF TOPICAL NSAID’s.

Non steroidal anti-inflammatory agents are contraindicated in patients in whom attacks of asthma, urticaria or acute rhinitis are precipitated by acetylsalicylic acid or by other drugs with prostaglandin synthetase inhibiting activity. Intraocular use of Diclofenac during surgical procedure is also contraindicated. The potential exists for cross-sensitivity to acetylsalicylic acid and other non-steroidal anti-inflammatory drugs. Topical NSAIDs are contra-indicated in individuals who have previously exhibited sensitivities to these drugs.
