

Patient Information

Guidelines following Endometrial Ablation

We hope that your stay in our Day Surgery Unit has been comfortable and to your satisfaction. We hope that you have a speedy recovery and that the following instructions will be of help.

Aftercare – When you leave hospital you should rest, returning to normal activities as you feel able.

It is normal to have some initial bleeding followed by watery loss from the vagina which can be heavy at first and may go on for three to four weeks. Do not use tampons or menstrual cups for four weeks post procedure to reduce the risk of infection.

Do not have sexual intercourse for four weeks or until any discharge or bleeding has stopped. You can have your usual bath or shower.

Please contact your General Practitioner (GP) if you experience foul smelling discharge, worsening pain or are feeling generally unwell.

Getting pregnant following endometrial ablation is unlikely but possible so you should still consider your contraception requirements.

Follow Up - We will tell you about any follow up before you leave. If you need an outpatient appointment we will request one for you and the date and time will be sent to you by post.

Stockings - If you have been given support stockings to wear it is important that you continue to wear them, day and night, until you are fully mobile (at least 24-48 hours). The stockings should be removed for a short time daily to wash the feet and legs. You may also hand wash the stockings but do not dry them by direct heat (radiator or tumble dryer).

Pain Relief – You may have a dull ache similar to period pain or cramps for a few days following the procedure. Over the counter pain relief is usually effective for this.

You were given the following pain killers while in Day Surgery

Paracetamol at

Codeine at

Guidelines following Endometrial Ablation

Ibuprofen at

Instructions for patients who have had a general anaesthetic.

Anaesthetic drugs remain in the body for 24 hours and gradually wear off over this time.

During the 24 hours following your anaesthetic, you are under the influence of drugs and it is important to follow these instructions:

- Do not drive a car or any other vehicle, including a bicycle.
- Do not operate machinery or appliance such as cookers or kettles.
- Do not drink any alcohol.
- Do not lock the bathroom or toilet door or make yourself inaccessible to the person looking after you.
- Drink plenty of fluids and eat a light diet, avoiding heavy or greasy foods.
- Take things easy for the day after your operation and do not work with machinery or take strenuous exercise.
- Do not make important decisions or sign important documents for 24 hours after your anaesthetic

Some people take longer to recover from the effects of an anaesthetic so these guidelines may continue to be followed for up to 48 hours, if necessary.

If there are any problems after you return home, please telephone your GP or out of hours GP service, or the Day Surgery Unit on 01793 604148 between 8.00am and 7.00pm, Monday to Fridays (excluding bank holidays).

After 7.00pm or at weekends please contact the Surgical Assessment Unit on 01793 604039.

If you have any suggestions on how we can improve our service, we would be happy to hear from you. Please write to:
