

Patient Information

Pacemaker Follow up

Why have I been given this leaflet?

This leaflet is for patients who have had a pacemaker fitted and their relatives. It provides general information about our pacing clinic, but does not replace the need for personal advice from a healthcare professional so please contact us on the telephone numbers near the end of the leaflet if you have any questions.

First follow up:

Your first check-up will be around two weeks after the pacemaker has been implanted. Depending on the type of pacemaker you receive, this appointment will either be at the hospital or a virtual check through the home monitoring box you will have been given post implant.

If the check is at the hospital we will download all the information from your pacemaker at the clinic appointment and ask you how you have been feeling since you received the pacemaker and the wound site will be checked.

If your check is a virtual one we will review all the information the home monitoring box has sent across to us, and then give you a phone call to check your symptoms and ask you about the wound site.

The appointment letter you receive will tell you which appointment you require.

Follow up appointments:

After this, your device will routinely be checked through your home monitoring box at either six monthly or twelve monthly intervals. We will set up the home monitoring box to send through the information for us to check it. After the device has been checked you and your GP will be sent a letter to let you know. If you have any concerns, in particular about any symptoms or the wound site, then please give us a call. If you require an appointment in the hospital clinic you will receive a letter informing you of the time and date.

Further information on your Home Monitoring Box:

On leaving hospital you will have been given a home monitoring box. Research has shown that home monitoring has benefits of both keeping you out of hospital and

Pacemaker Follow up

increasing life expectancy. Please plug the home monitoring box into a socket next to your bed or where you normally sleep and ensure that it remains plugged in at all times. If we lose connection between the home monitoring box for more than two weeks we will receive a message from the box to tell us. We will then send you a letter informing you of this, and instructions of how to get it connected again.

Any information sent over to us by the home monitoring box will be checked by a physiologist and forwarded on to your Consultant, if necessary. Please be aware that this is not a 24 hour service and typically runs Monday to Friday 09:00 to 17:00.

If you require further information, please contact the cardiac device clinic on:

Administration queries: 01793 604250

Device queries/ symptoms: 01793 604257, Monday – Friday 09:00 – 17:00

Further information can be obtained from the British Heart Foundation website
